

CLAIMS

I claim:

- 1 1. A chemical composition for use in a tattooing process,
2 comprising:
3 25-40% by volume of a speed stick composition;
4 15-30% by volume of green soap solution;
5 25-40% by volume of sterilized water; and
6 2-20% by volume of rubbing alcohol;
7 wherein the composition forms of fluid capable of being
8 sprayed on a body part in order to temporarily bind a stencil to
9 the body part to guide a needle during tattooing.
- 1 2. The chemical composition according to claim 1, wherein
2 the speed stick composition contains vegetable oils, glycerine and
3 alcohol.

1 3. A method of tattooing, comprising the steps of:
2 preparing a tattoo stencil;
3 washing a body part;
4 shaving body hair from the body part;
5 spraying a stencil binding composition on the body part to
6 wet the body part;
7 applying the tattoo stencil and thermal spirit stencil paper
8 to the wetted body part;
9 tattooing the body part using the stencil as a guide.

1 4. The method of tattooing according to claim 3, wherein the
2 stencil binding composition consists essentially of:
3 25-40% by volume of a speed stick composition;
4 15-30% by volume of green soap solution;
5 25-40% by volume of sterilized water; and
6 2-20% by volume of rubbing alcohol.

1 5. The method of tattooing according to claim 3, wherein the
2 tattoo stencil is prepared on thermal spirit stencil paper.
